

- SPI Slave Receives:**
- System State
  - Sensor Colors (W/R/G/B/K)
  - Wheel Speeds (v\_L, v\_R)
  - Rotation Angle
  - NAVCON State
  - Line Detection Status
  - End of Maze Flag
  - Communication Status
  - Diagnostic Strings
  - State Announcements
  - + 3 more packet types

**Packet Format:**  
257-byte frames @ 200 Hz  
SPI 2 MHz clock rate

**WiFi Configuration:**  
Mode: Access Point (AP)  
SSID: "ERD-Byron"  
IP: 192.168.4.1  
Security: Open (diagnostic-only)  
Max Connections: 4 concurrent

**WiFi Dashboard**  
10 Hz

Operator  
(Remote Browser)

- Web Dashboard Features:**
- Real-time state display
  - Sensor data visualization
  - Motion parameter graphs
  - NAVCON decision trace
  - Communication diagnostics
  - System uptime/loop timing

Update Rate: 10 Hz  
Latency: ~150 ms typical

**GPIO Command Injection:**  
Pin 4: Touch inject  
Pin 2: Tone inject  
Pin 15: Send command

Enables remote testing  
and operator control via  
web dashboard
